

Simply Everything

Bunny construction

Supplies needed.

- 2 pieces of cotton fabric larger than your embroidery hoop (bunny body)
- Two pieces of fabric for the appliqué ears
- One piece of fabric for heart in belly
- Sewing thread for construction, and embroidery thread for embroidery.
- Poly fill stuffing.

Construction

1. Send Embroidery design to your embroidery machine. Hoop the bunny fabric with a tear away stabilizer. Remember to use the largest

hoop available for your embroidery machine. Fabric should be larger than hoop.

2. Embroider the bunny, using your thread color choices.

3. When you come to the last color, place another piece of your fabric, right side facing down over the bunny embroidery. If your embroidery machine does a basting stitch,

baste down the fabric. The last color will be the sewing together of the bunny.

4. Remove the Hoop and remove the embroidery from the hoop. Cut around the bunny, leaving a $\frac{1}{4}$ inch seam allowance. With a pair of sharp scissors, clip into each curved area close to the stitching, so the bunny will keep its shape.
5. Carefully turn the bunny inside out. Use a blunt object like a pencil to help turn, push out the ears and arms and legs.
6. Using poly fill stuffing, stuff the legs and arms first. Using a small amount of stuffing at a time will make it easier. Use a blunt tool to push stuffing in place. If you want the bunny to sit up by itself, stitch across the legs where it meets the body.
7. Once the arms, legs and ears are stuffed, then over stuff the body. Next close the opening at the bottom with a hand slip stitch.
8. Make a pompom for the tail and sew it on.
